

CRUD:

Create, Read, Update, Delete

Put & Patch

Already Present User Data $\rightarrow \{id: 1, name: ABC, age: 20\}$
1.) Client sends entire data that needs to be updated
 $\{id: 1, name: ABC, age: 30, email: abc@gmail.com\}$
 $\rightarrow$ B.E. will save incoming data blindly in Data Source

Data Src $\rightarrow \{memory, db, cache, file server, cloud storage\}$

2.) Client sends only attributes that need to be updated
 $\{email: abc@gmail.com\}$

$\rightarrow$ B.E. will merge incoming data & existing data & save result of merge

Ex 1 $\Rightarrow$ incoming: $\{email: abc@gmail.com\}$
existing: $\{id: 1, name: abc, age: 20\}$
merge: $\{id; name; age; email;\}$

Ex 2 $\Rightarrow$ incoming: $\{email: abc@gmail.com\}$
existing: $\{id: 1, name: abc, age: 20, email: abc@School\}$
merge: $\{id; name; age; email; \}$ Yahoo.
 $\{incoming \text{ will get preference}\}$

≠ i/p from FrontEnd

f.) Variables:

- Request Param: more readable
- Path variable: more secure

2.) JSON Data: @Request Body

≠ Unsafe Methods → Post, Put, Patch

≠ Safe Methods → Get, Head, OPTIONS

returns metadata about a resource on server

test url exist or not by frontend

data or metadata

↓
bulky

only returns metadata but not actual resource

≠ Duplicate API

We cannot have duplicate API in one server including multiple controllers.

2XX

200 - OK

201 - Accepted/created

204 - No content to be returned

3XX

Redirection

4XX

something bad with req.

5XX

Server issue

* Response Entity → return status with data
(employee)

↳ Controller Advice → (employee)
